

RioTinto

Apprenticeship programmes

As experts in mining and metals, we produce materials that are essential to human progress. You'll find them in smartphones, planes, cars and throughout your home.

The mining industry is changing. People will no longer drive big machinery; they'll reach for tablets before spanners; and be able to work remotely thousands of kilometres away.

As an apprentice, our four year training programme will provide you with hands-on technical experience designed to give you the right skills and knowledge as you work towards attaining your certificate.

We have the following programmes available:
Electrician
Diesel mechanic
Mechanical engineer

Did you know studying **STEM (Science, Technology, Engineering, Maths)** can lead you towards a career in areas such as automation, robotics, engineering or geology; where you can really influence the way the world works?

You must have a strong commitment to safe work practices with a desire to become part of a highly skilled team. Applicants with a minimum C grade in year 12 maths and english will be highly regarded.
